Connecting an Android device to the Personal Devices wifi

The screenshots in this guide were taken on a Google Nexus 7 device running Android 4.4.2. The appearance of your device may vary slightly.

Access the Wifi settings. The method to do this varies widely among Android based devices, on stock Android, you swipe down from the top right of the screen and then select either Settings or Wi-Fi.

Once you get to the list of available networks, select Personal Devices.

In the Identity box enter your Marlington username and enter your password in the Password box and then click Connect.

After verifying your login information you will be returned to the Wi-Fi menu where you can tap on the network again to verify your connection.
