

Connecting an iOS device to the Personal Devices wifi

The screenshots in this guide were taken on a device running iOS 7. The appearance of your device may vary slightly.

Locate and open the **Settings** icon and then select **Wi-Fi**.

Your device should scan for, and present a list of available wireless networks. Select **Personal Devices**.

Enter your Marlinton username and password and click **Join**.

You will be presented with another screen asking you to accept the server's security certificate. Click **Accept**.

Verify that you are connected by looking for the checkmark beside the network name, and the wifi signal indicator in the status bar.
